

WHAT'S NEW IN THIS VASL VERSION – VASL6.7.4-beta4

Bug Fixes

Improvements

Improvement 1: Added preference to set opacity of counters during LOS checks.

Features

Feature 1: LOS Checking in Night Scenarios

Until VASL-6.7.4, VASL checked LOS at Night as if it were day, ignoring NVR restrictions and the effect of Illumination and gunflashes. VASL6.7.4 introduces new functionality to check LOS in accordance with the Night rules. NVR and other night settings will persist from one session to another.

The screenshot shows the "Scenario Information" window in VASL. It has a title bar with a close button. The window contains several fields: "Axis moves first" with a dropdown set to "1", "Axis ELR" and "Axis SAN" both with question marks, "Allied ELR" and "Allied SAN" both with question marks, "Allied Booby Trap(A/B/C)" and "Axis Booby Trap(A/B/C)" both with question marks, "Weather" set to "Clear", "EC" set to "Moderate: 0", "Wind" set to "None", "Wind Dir" set to "1", "Night" set to "Yes", and "NVR" set to "3". There are "Private notes:" and "Notes:" text areas at the bottom, and a "Save" button at the very bottom.

To enable this functionality, new information is now entered and displayed in the Info window. This window will automatically open when (a) Night is turned on or (b) a new game using Night is opened on VASL, and can be opened by clicking the INFO button as normal.

The Night dropdown should be set to Yes and the NVR should be the current NVR (changes to the NVR can be made during play and will take effect immediately). Be sure to click Save at the bottom of the window!

Draw LOS strings as normal and the rules covering NVR and Illumination and gunflashes should be applied to the LOS result.

Compatibility Notes

Minimum Version Required: Built with VASSAL 3.7.26
