

WHAT'S NEW IN THIS VASL VERSION – VASL6.7.1-beta7

New Features

Feature 1: Adding full set of SASL dr/DR buttons (enabled via preference in VASL tab). Remove SASLDice extension as it is no longer needed.

Feature 2: Adding SASL suspect counter activation flags in conjunction with the SASL Campaign Game Roster version 4.0 (see the SASL CGR help for more details).

Bug Fixes

Fix 1: Revised LOS code for Cropping and Flipping

Fix 2: Re-enable LOS Checking for selected HASL Maps

NOTE: this code will now work with geo maps – both the 33 x 10 hex and 17 x 20 hex sizes and those HASL maps which previously supported LOS.

None of the changes have caused games to crash during testing to date. All that will happen is that the LOS Engine will fail when a game is opened if a bug is encountered. It will be safe to continue play but only the basic VASSAL LOS string will display.

Fix 3: Fixing masking for semi-transparent (small) sniper counters.

Fix 4: Tweaking SASL Suspect counters, fixed font issue for AmmoB.

Fix 5: Fixing PP for dm Japanese 50mm SW mortars.

Fix 6: Communist Phone and Radio counter names with correct case.

Fix 7: Correct SS 5-4-8 AE smoke exponent from '2' to '4'.

Fix 8: Fixing various vehicle wrecks not working.

Improvements

Improvement 1: Debris Overlay added to Draggable Overlays; has changeable level background and works with LOS

Improvement 2: Sangar counter now has winter color

Improvement 3: Added "Out of Gas" and "Out of Gas Abandoned" counters.

Improvement 4: Added SVG Barrage counters.

Improvement 5: Panzer Lehr symbol updated.

Improvement 6: Update American counters' label background color to match the new American counters' base background color.

Compatibility Notes

Minimum Version Required: Built with VASSAL 3.7.18.
