

WHAT'S NEW IN THIS VASL VERSION – VASL6.7.4-beta1

Bug Fixes

- Fix 1: HexGrid counter Nudge working
- Fix 2: LOS bugs with hexside overlay counters (walls, hedges, bocage) fixed
- Fix 3: CTRL+Numpad Move bug
- Fix 4: Hatten LOS bugs fixed
- Fix 5: Disappearing concealed 5/8 counters when rotating fixed

Improvements

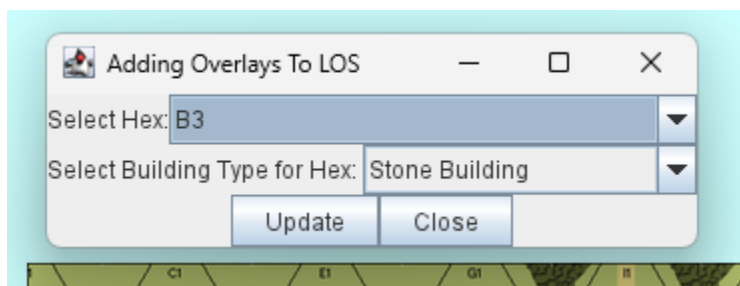

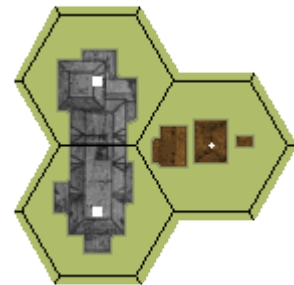

- Improvement 1: Preserve Elevation with Overlays now hides underlying terrain and persists across sessions
- Improvement 2: Can now set building type for each hex of mixed building overlays
- Improvement 3: Allow user configurable opacity for counters during LOS checks

Features

Feature 1: LOS with complex building overlays

LOS checking now works with most overlays, including overlays containing more than one building type (such as overlay X15 shown here).

When adding these overlays to a board using the traditional Boardpicker method, users will see a new text box appear on screen after they click OK to finish the board selection process and the map opens.

and then move to the next hex. Once you have added all the hexes, click Close. The map will open and the overlay will work properly with LOS.

For those who don't wish to bother with this feature, simply click Close and continue.

To add LOS data for the overlay, select a hex covered by the overlay from the Select Hex dropdown, and then the building type for that hex. Click Update

Compatibility Notes

Minimum Version Required: Built with VASSAL 3.7.22.
